

# T3 Rpi WiFi Router Setup TP Link TL-WR902AC

We recommend [purchasing this router pre-programmed](#) to provide the rpi wireless network, but it must still be connected to your local school WiFi.

This router allows you to connect to any type of wireless network and re-broadcast it as a local private WiFi network – also one LAN port can be connected to a local networking device such as a Raspberry Shake.

This allows the RPi computers to talk to each other over the LAN and do other local area networking tasks.

## Configuration Guide for Pre Programmed Router:

1. Connect to rpi WiFi network, password is "raspberrry"

2. Login to Router:  
192.180.0.1 in your browser such as Chrome.  
admin : admin for user  
: pass

3. Configure your Wifi connection:  
use the name + password you would normally use to connect to the existing network
